### New Features

- Vehicle Lookup - When adding a vehicle, users can now automatically populate the vehicle details by entering the registration number, making the process as effortless as possible. This service will be available as standard Expenses functionality and will incur no charge for using it. Enjoy!

### Bug Fixes

- Expenses Mobile crashed intermittently when attempting to add and save a meal or hotel expense.
- An error occurred when a user attempted to add a vehicle if they had selected a Vehicle Journey Rate. This was caused by incorrect Vehicle Journey Rates being displayed for the set Financial Year.

This issue only occurred when two or more Financial Years were configured.
