Expenses Mobile - Receipt Scan - Feature Overview

Last Modified on 15/12/2019 5:49 pm GMT

Overview

This concept was born from the premise that whilst out on the move, working hard, you will incur different expenses which are stored as receipts in your wallet. These will build up in your wallet until you get enough time to remove them all and tackle the task of adding them manually as new expense items. We wanted to provide an easy way of recording these receipts digitally, whilst on the move, and then provide significant help and automation when the time comes to add your expenses using Expenses Mobile.

Receipt Scan introduces a 'receipt first' approach to adding expenses. The idea behind the feature is that you can take photos of your receipts at the point of purchase and save them into your digital 'Receipt Wallet'. You can then build up these digital receipts until you are ready to enter your expenses into Expenses Mobile. At the point of adding a receipt image to your Receipt Wallet, Receipt Scan will use OCR technology to automatically capture details such as Total, VAT, Currency and Date. This takes away the need to enter the data yourself, providing a streamlined and efficient way to add your expenses from your digital Receipt Wallet.

Free your 'real' wallet from receipts and start enjoying your digital one!

Implementation

1. **Receipt Scan** is available to all **Expenses Mobile** users. For guidance on how to use **Receipt Scan**, view Mobile - Add an Expense using Receipt Scan or alternatively you can check out ourFAQs.
