Version: 2019.6.20.1

Enhancements

- **Expenses Expedite** - We've improved the user experience when managing receipts for expense items that have failed validation and have been returned. The changes we have made will remove the issue of claims becoming stuck after editing or deleting the final returned expense item. (165565)

For more information, view [Edit a Failed Validation Item](#).

- We've made an enhancement to how driving licence check consent is handled when you change certain personal details with the DVLA. The following statements are now true for Driver Check customers/users:

My driving licence details have changed, do I need to provide my consent again?

It depends on which details have been changed with the DVLA.

- If you have changed your First Name, Middle Name, Surname, Date of Birth or Gender with DVLA you will be required to provide consent again as your Driving Licence number will have changed. Your consent will be revoked from the next driving licence check that occurs after the DVLA have processed your change of details. When this occurs, you will receive an email notification.
- If you have changed details which are not listed above (address or photo for example) you will not be required to provide consent again. Assure Expenses will be updated with your new driving licence details when the next check is performed. In the interim period, this can lead to discrepancies between the information stored in Assure Expenses and what you have provided. It is your responsibility to inform your organisation of any changes. (165701)

Bug Fixes

- Fixed an issue which allowed claimants to continue claiming business mileage despite having their driving licence check consent revoked. On the date of the licence refresh (determined by the lookup frequency), the licence check failed due to the revoked consent but was not updated correctly, therefore the driving licence was not marked as invalid. (166031)

Performance Improvements

- We've made some tweaks to improve the performance of certain pages related to claims.^(165759, 165959)
 - We've made some tweaks to improve the performance of the redirect claim feature.⁽¹⁶⁵⁷⁷²⁾
