

# June - (09/06/2022)

Last Modified on 09/06/2022 3:37 pm BST

*Date: 09/06/22*

*Version: 2022.6.8.2*

## New Features

- We have replaced the deprecated "Postcode anywhere" address lookup and retrieval service with the new version from "GBG Loqate". This is replaced in both the web version of Expenses and in the Expenses Mobile App. New build properties were no longer being added to the database for the older Postcode Anywhere system but now that this is replaced, addresses for employee records and mileage claims should be successfully identified. (187616, 187370)
- We have updated the new "GBG Loqate" address retrieval service to include address coordinates for those countries where it is not possible to look up and retrieve address details using a postcode. (187679)

## Bug Fixes

- We have replaced the *PostCodeAnywhere* postcode lookup service with the latest version from *GBG Loqate*. Now, address line 1 should always be returned. (58565)
  - We've updated the flag management option so that a claimant viewing their submitted or previous claims can now view the approver's justification for allowing an item to be reimbursed when the potential duplicate flag rule is indicated for the item. Previously, the claimant would only see their own justification. (143816)
  - We have enhanced the mileage functionality so that if a home address is selected in the mileage journey step, the home address used will be the correct address as recorded in the employee record for the date the expense was incurred. Previously, the address that was presented in the mobile app was the one with the smallest id value (added to the employee record first) that had no end date. (187847)
