Date: 27/07/22

Version: 2022.7.26.2

New Mobile App Enhancements

- We've enhanced our app monitoring software to add tracing of errors. This increases the observability of the app and enables us to better diagnose and fix any errors. (188541)
- We've added an option to the receipt wallet that allows users to add further receipts using an image stored in the gallery. Previously, this option was available when adding an expense item to the claim that did not already have a receipt in the receipt wallet. (188601)

New Mobile App Bug Fixes

- We fixed an issue that caused the mobile app to sometimes crash when selecting an image. (188532)
- We've fixed an issue that invoked unnecessary documents checks that prevented clients from adding mileage expense items when the duty of care options are not enabled, but the option "use date of expense for duty of care checks" is enabled. (188554)
- We've fixed an issue where duty of care checks could fail when the automatic driving license checks were enabled, but the mileage expense item being claimed was not set to make duty of care checks. (188563)
- We fixed an issue where the contact details were not saved for the email-in functionality when using an android device. (188542)
- We've fixed an intermittent error where the system sometimes reported a null exception when using the home-to-office deduction rules. (188550)
- We've added some additional checks so that when the duty of care automatic lookup options are enabled, and the option "use date of expense for duty of care checks" is also enabled, the documents checks reported that the driving license was not valid preventing you from adding your mileage expense item. (188569)
- We've updated the mobile app to prevent it from reporting an issue when using the camera for the very first time. (188578)
- We've updated the mobile app to allow fuel card items from an imported statement to be matched to an existing expense item on the current claim. (188579)
- We've updated the mobile app to allow purchase card items from an imported statement to be reconciled onto the current claim. (188593)
- We've fixed an issue where mandatory user defined fields were highlighted as mandatory after

they had been completed with the claim details. (188592)

- We've made changes to allow extra padding at the foot of the screen to allow the user to better see and use the fields at the very bottom of the screen. (188595)
- We've updated the app to allow the chosen code to be correctly viewed when the code is used in general details rather than a cost code breakdown. (188588)
- We've updated the user permissions for the app to allow the chosen code to be correctly viewed when the code is used in a cost code breakdown. (188596)
- We've updated the mobile app for iOS devices, to navigate the user to the device permissions area if permissions to access photos are set to "none" but the user tries to add a receipt from the gallery. (188594)
