New Mobile App Enhancements

- We've replaced the camera tooling used in the mobile app with a newer tooling option. This allows better quality images to be captured for expenses. (188058)
- We've updated the mobile app to automatically show the date picker and allow confirmation of the date the expense item was incurred when added from a receipt from the wallet, or without a wallet receipt. Previously, if the expense was added from the receipt wallet before the OCR processing was completed, the date then defaulted to today's date. This was not visible to the claimant. (188669)
- We've updated the mobile app date picker to restrict date selection based on the Expenses configuration to improve the accuracy of claims submitted for approval. Now, when a claimant is adding an expense item to their claim, an invalid date range will be disabled in the date picker and dates within this range will not be able to be selected. This refers to the following types of dates: dates for expenses not yet incurred, dates outside the start and end date specified in the expense item configuration, dates outside the start and end date specified on the item role associated with the claimant. All other dates will be available for selection by the claimant. (188678)

New Mobile App Bug Fixes

- We've replaced the camera tooling for the mobile app to allow the capture of better quality images of receipts. (188655)
 - We've made a change to the address lookup service for the mobile app so that where a postcode has only a single premise address, this will be retrieved correctly for a mileage claim. Previously, the address service would expect multiple premises to be returned for each postcode. (188695)
 - We've updated the mobile app to allow negative expenses for standard items, and for mileage items without journey steps where the claimant enters the total number of miles to be claimed. Previously, only positive values were allowed. (188857)
 - We've updated the mobile app so that when a claimant is reconciling a credit card item they cannot amend the date that has been imported via the corporate card statement. (188843)
