Release Notes - 09 March 2023

Date: 09/03/2023
Version: 2023.3.6.1

Bug Fixes

- We've restricted the code breakdown to up to 10 split codes to prevent an error from occurring. This change applies when you add an expense or when you set the default employee code breakdown. Previously, if you attempted to add more than 10 split codes, only the first 10 were saved. (173079)
- We've made an update in all areas where the line manager can be chosen. Now, the list of available employees excludes archived records. (190408)
- We've amended the calculation of the cumulative mileage threshold when adding mileage along with a fixed daily deduction that is later added to the claim on claim submission. Now, the calculation of the cumulative mileage only includes mileage expenses for the current financial year. If you claim a mileage expense retrospectively but for a date in the previous financial year, it will not be included in the total. (190589)

Enhancements

- We've improved the performance of the address lookup by reducing the number of searches made to retrieve the address details. Previously, the address lookup was multiplied by the number of address labels, but now, a single lookup is performed regardless of the number of global or personal labels in the system. (190404)
- We've improved the performance of Expenses when accessing a current claim where there are many credit card items to be reconciled. Previously, the ongoing claim took a long time to display and a long time to reconcile the card items. (190528)

Zendesk (for system administrators): As a system administrator you can subscribe to Zendesk for more information. Please follow the link to Zendesk here: https://www.allocate.support/hc/en-us/articles/7990202072860.
