Release Notes - 30 March 2023

Date: 30/03/2023
Version: 2023.3.29.4

Bug Fixes

- We've significantly enhanced the performance of the Fuel Receipt to Mileage Allocations calculations to prevent timeout issues. These issues occurred when making calculations in systems where a very large number of mileage items were saved and included in the calculations. We've also restricted the fuel receipts to those dated within the last 18 months. (188176)
- We've fixed an issue in the mobile app where a mileage item claimed as a pence per mile item but with only a total number of miles and no journey steps, would not always display correctly on the current claim. (191222)

Enhancements

- We've redesigned the Fuel Receipt to Mileage Allocations calculations. This will improve the performance when making the calculations where a very large number of mileage items are saved and included in the calculations. Now, the procedure that used to take 1.5 hours or even time out, runs in a few minutes. (188873)
- We've updated the Assure Expenses default colour scheme to our new RLDatix colours. If you use the default system colours you'll see the colour changes, but you'll still be getting the same Assure Expenses experience and functionality! If you have configured Assure Expenses with a custom colour scheme, only elements such as buttons and icons will be updated to reflect the new default colour, whilst your custom colours will remain as they are. (189847)
- We've updated the default colour scheme for the buttons and icons in Expenses in line with our new product branding. (189860)
