

# Release Notes - 25 September 2023

Last Modified on 06/11/2024 2:03 pm GMT

Date: 25/09/2023

Version: 2023.9.19.4

## Bug Fixes

- We've fixed the way adding a description for new attachment types in the administrative settings is handled. Previously, when you add a description of over 500 characters, the description was shortened upon saving. Now, a message displays if the description is over 500 characters. (21392)
- We've fixed an error that appeared when amending or deleting a project code that did not have a description where a project code description was not defined in the system as a mandatory field. (192610)
- We've fixed an error that appeared in DataDog when the Framework app was used. The error appeared because the app was trying to log in to the public API. (193039)
- We've fixed an issue that was related to using a new line in the description box. The issue occurred when you uploaded an attachment in an email template and added a description. (193293)

## Enhancements

- We've added a new option for the import of HSBC credit cards for reconciliation in the Expenses system. (190069)
- We've updated our Open Telemetry library for the Duty of Care Reminder Service to allow tracing, which will give increased observability. (190788)
- We've added logging and tracing to our ESR interface services to allow increased observability. (191953)
- We've added a new option for the import of Arbutnot credit cards for reconciliation in the Expenses system. (193075)
- We've added a new option for the import of RBS credit cards for reconciliation in the Expenses system. (193094)
- We've added a new option for the import of Nat West credit cards for reconciliation in the Expenses system. (193095)
- We've updated the SSL Certificates for the Expenses product. (193407)
